Election/Restrictions

This application contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

The species are as follows:

Figures 3, 4, and 5; if figure 4 is elected, then a further election between Figures 8, 9, 10, and 11 is required; and one of Figure 13 or 17 should also be elected for a specific type of end.

Applicant is required, in reply to this action, to elect a single species to which the claims shall be restricted if no generic claim is finally held to be allowable. The reply must also identify the claims readable on the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

The claims are deemed to correspond to the species listed above in the following manner:

It is not clear based upon the figure and specification as to exactly which claims coincide with the figures, however, the following is the examiner's best understanding of the invention break down based upon figures:

Figure 3: claims 1-3;
Figure 4: claims 4, 10, and 14;
Figure 5: claims 5, 10, and 14;
Figure 8: claims 7, 10, and 14;
Figure 9: claims 10 and 14
Figure 10: claims 6, 8, 10, 14, and 17;
Figure 11: claims 6, 8, 13, and 17-20.

Figures 13 and 17 do not appear to have claims directed solely to the differences in the figures, however, an election should still be made at this time so the examiner is only required to search one type of manifold structure.

The following claim(s) are generic: claims 1-3 and 11 appear to be generic to all of the species.

The species listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, the species lack the same or corresponding special technical features for the following reasons: the same technical feature of a single layer of spiral wound tubes is different from that of two layers of tubes, which is different from whether the tubes are provided with a coating, or a coating covers the entire bundle of tubes, or has no coating at all; which is different from whether a core is hollow or solid, where each has different structure from one another and therefore different technical features based on the different elements that are required by some embodiments and not by others.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement may be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To preserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
